Password: Sparkes

2)username: eren_Vanguard_tit
Password: tanjiro

Manager login

3) Username: kamado12
4) Password: kamado

Lead login

1)username: naruto_kyubi
Password : hinata

To see how website works

Manager login

5) Username: kamado12
6) Password: kamado

It opens home page

Click on view work flow to view assigned work flow

Click on create work flow

Example

Enter workflow name: amazon_clone(your wish)

Click on add step:

1)type manager
Click on confirm

2)type developer

Click on submit

Now we can see new workflow if we click on view workflow

Proceed workflow

Click on proceed workflow

1)type work flow name

In our case: amazon_clone

Then type message : ex: project approved for next step (this message will go to developers if manager approves)

2)click on approve:

How workflow transfered to developers so logout now

Login as developer(using password and email)

We have profile page

additional information about website
